

About the school

From Gina Chen, Provision international Inc., Taiwan

With a significant changing environment in Taiwan, The Central Training Center (CTC) has cultivated more than 70,000 skilled manpower since established in 1976. In recent years, "vocational training" is facing great impacts due to the political and economical changes in Taiwan. In response to social demand, CTC has adjusted to be an action team, being "flexible, enthusiastic, responsible, endeavoring and creative", focusing on "innovation and originality", "customer-orientated service", "decreasing unemployment rate", "integrating training with job placement", "promoting lifelong learning & inspiring employees' self-growth", and "setting up development directions and mutual visions."

CTC started to include 3DESIGN V5 in its training program on May, 2008. The training center provides much more professional and integrated jewel courses. After one year's evaluating, Teacher Wu knows for certain that 3DESIGN is the best tool for the jewellery design.

Teacher Wu said:" when their students learn 3DESIGN software, they found that the basic drawing concept of 3D design is almost similar to the traditional hand-draft. Plus the friendly interface, it makes students easy to learn the software and able to finish complex design in a short time.

Besides, 3DESIGN has a great jewellery library. It is really a big help for designer. They can enrich their own library freely. By saving the special or basic design they often use, designers can save lots of time. Even more, they can quickly finish a new design by modifying the old catalog in the library. With the fast developing of the jewellery, consumers always want to have customized style. They often create their own design, and then get the STL file by 3DESIGN. So even it's a small studio, they also can satisfy customers' need with the low cost.

As well as powerful design functions, 3DESIGN has realistic rendering module. It enables the designers to present their design immediately to customers. But before, designers could only give 2D files to their customers; it was difficult to understand their concept. Now, 3Design can present all kinds of different pictures with beautiful effect and help reduce possible misunderstanding between designer and customer". Teacher Wu added: "the students, even they are just graduated from CTC, get good basis in jewellery. After receiving 3DESIGN training, they are of more competitive".

The students' satisfaction with 3DESIGN software has also a good influence on the jewellery company's management and even can positively impact the future of jewellery design. Users can master 3DESIGN in a short time, while learning jewellery design concepts, what enhances company's productivity and competitiveness".

Vision numeric, 3DESIGN's developer, is very positive about the training of talented jewelers in Taiwan. With the cooperation of Piovision Company, the jewellery design in Taiwan is starting to enter into the 3D CAD environment, making up for the international business.
