

Yolaine Romeuf :

3DESIGN? The most adapted solution for my work as a designer.

Yolaine Romeuf is a 3DESIGN user since April 2006. Designer and producer at the DMR Prototypage company, she creates virtual renderings of her customers' sketches and offers complementary services such as layer by layer printing, machining and also finishing of the pieces.

Before she tried **3DESIGN**, Yolaine tested many other CAD software. But these tryouts weren't concluding at all, on the opposite, « I wasn't satisfied because they were not rapid enough, not adapted to jewelry and renderings were often of poor quality».

Yolaine then discovered and tried **3DESIGN**. With her experience in 3D modeling, she found software very easy to manipulate, fast. She soon recognized many more assets in the software. Rapidity, user-friendliness, powerful, intuitive modules (especially the rendering module), she confirms « these capabilities are absolutely necessary in order for me to complete my orders. **3DESIGN** is my primary work tool, I cannot make a mistake choosing it. »

The renderings allow her customers to visualize the finished jewel so that they can both share remarks and save time. Yolaine sends her realistic renderings by e-mail and can exchange opinions and comments with her customers as soon as they receive the images.

In September 2006, during a visit at Orhopa, a jewelry trade show in Paris, she takes a peek at the new V5 version of **3DESIGN**. « I was happily surprized with the demo of version 5. I did see many new functions for specific jewelry applications such as ring clusters, openwork in a honeycomb style, a signet ring builder... The software's evolution is very satisfying. »

A few examples of Yolaine's renderings
